

Hasbi

FULL-STACK SOFTWARE ENGINEER

hasmbly@gmail.com | github.com/hasmbly | linkedin.com/in/justhasby

PROFILE

I have worked as a software engineer since 2019. I currently work as a Full-Stack Developer at PT Vioren Informatika Teknologi. I have a strong interest in clean architecture and technical work related to system performance, memory efficiency, and other system improvements. I enjoy digging into and solving complex technical problems.

CURRENT TECH STACK

.NET 10, ASP.NET Core Web API, Microsoft SQL Server, Blazor, Azure DevOps, Azure Resources

PREVIOUS TECH STACK

Laravel, Go Echo, Angular

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer

February 2020 - Present

PT Vioren Informatika Teknologi

- Develop enterprise software across web, desktop, services, infrastructure, and hardware-integrated environments.
- Contribute to solutions for energy, shipping, manufacturing, and mining clients.
- Apply clean architecture and investigate performance, memory, security, and maintainability concerns.

Electrical Engineer

December 2018 - May 2019

PT Intecs Teknikatama Industri

- Worked on the AdaptFMS Fuel Management System project at BUMA Lati, Berau Coal, East Kalimantan.
- Project scope included RFID authorization for people and units, pulser and flowmeter measurement, tank gauging, motorized valves, and pump control.
- Installed low-voltage wiring for panel boxes and installed panel boxes on fuel trucks.

System Engineer

April 2014 - October 2018

PT Netsource Global Technologies

- Installed, configured, and troubleshoot software, hardware, servers, and networks.
- Installed, configured, and troubleshoot low-current electrical systems and CCTV.
- Helped with research and integrations between third-party hardware or systems and custom systems.
- Worked with clients including the Agriculture Department and Regional Police.

PROJECT HIGHLIGHTS

Coal Weighing and Hauling Operations

December 2025 - August 2026

PT Adaro Minerals Indonesia Tbk

- Developed a hybrid WPF-Blazor desktop application integrating RFID readers, weighbridges, and LED traffic-light relays.
- Built a concurrent .NET Linux service that consumes MQTT data and processes hauling transactions and trip data for RFID-tagged dump trucks.

Investment Monitoring System / Project Monitoring on Return

Release 1: September 2024 - November 2024

Release 2: May 2025 - December 2025

PT Pertamina International Shipping (Marine Logistics)

- Monitors investments that have passed planning and reached the Final Investment Decision stage.
- Tracks monthly economic data from the execution stage through the on-stream stage.

DevSecOps Implementation

March 2024 - December 2024

PT Pertamina Hulu Energi (Upstream)

- Implemented DevSecOps using Azure DevOps and hybrid Azure and on-premises infrastructure.
- Used Azure Pipelines, on-premises agent servers, SonarQube for SAST, and IIS and Azure Web Apps for web hosting.

MyDents Dental Clinic System

October 2023 - December 2023

Dental clinic information system

- Developed an information system for dental clinics.

Business Applications and Data Services

January 2021 - February 2025

Upfield / Flora Indonesia - Flora Food Groups

- Worked on the Promotion and Claim Management System (PCMS).
- Worked on data retrieval services for distributor secondary sales from Accurate Online Indonesia.

Fortifex

February 2020

Cryptocurrency portfolio platform

- Software development platform for centralized and managed cryptocurrency portfolios across multiple exchanges and wallets.
- Designed to support safer cryptocurrency transactions and trading for businesses and individuals.

SILADU - Sistem Layanan Aduan

July 2019 - December 2019

Social Affairs Agency

- Handled back-end development for the Complaint Service System.
- The system helps Jakarta residents check their social-aid status and submit questions from home.

EDUCATION

Universitas Indraprasta PGRI (UNINDRA)

2014 - 2018
